

## Avatar Instructions

Follow these instructions to create your own high-quality avatar using Elai!

To make the perfect shots, adhere to the following requirements:

**Duration: 5-7 minutes.** This allows us to select the best segment from your recording.

**Background:** Choose a background based on the type of avatar you purchased.

For **Selfie/Scenario Avatars:** you can use any background.

For **Studio Avatars:** Use a plain background, typically green.

**Camera:** Clean your camera or smartphone lens to ensure a clear image.

**Recording Resolution:** Select the optimal recording resolution:

- **iOS:** Settings > Camera > Record video > 4K, 30 fps.
- **Android:** Camera app > Menu > Settings > Video > Rear camera resolution > UHD 4k.

## Look

- Hair: Keep hair neat to enhance the quality of background removal. Please avoid stray hairs or large wavy curls.

- Clothing: For studio avatars, wear clothing that contrasts with the background.

- Minimize reflections on teeth and glasses.
- Shadows: Avoid shadows under the nose or around the neck. Use diffused lighting.
- Beard: It is best to avoid a thick and heavy beard.

## Position

- Actor's Movements and Positioning:
  1. Move your head mostly in the horizontal space, i.e. you can twist your head left and right.
  2. Minimize head movements in the vertical space, i.e. minimize up and down head movements.
  3. Move head smoothly, with no sharp movements.
  4. Open your mouth wide enough to capture the teeth and expressions properly, but avoid opening it very extremely, as that may cause unexpected behavior in the avatar. Follow the [recommended](#) expressiveness video

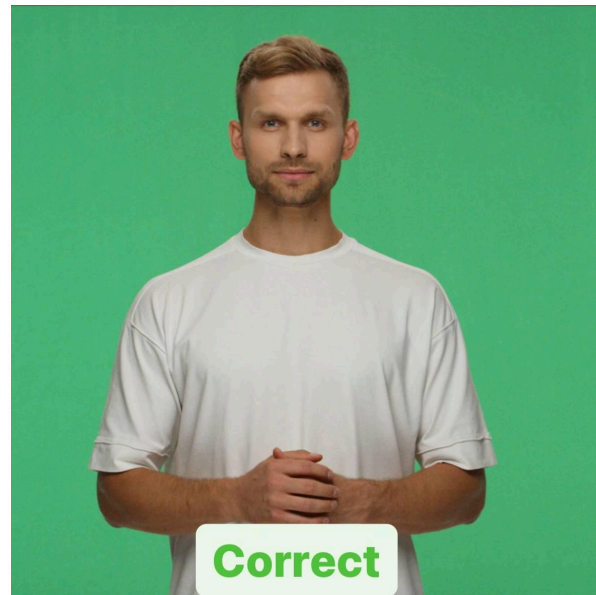

Keep your hands below the chest area.

- Position the actor in the center of the frame.
- Minimize space above the head

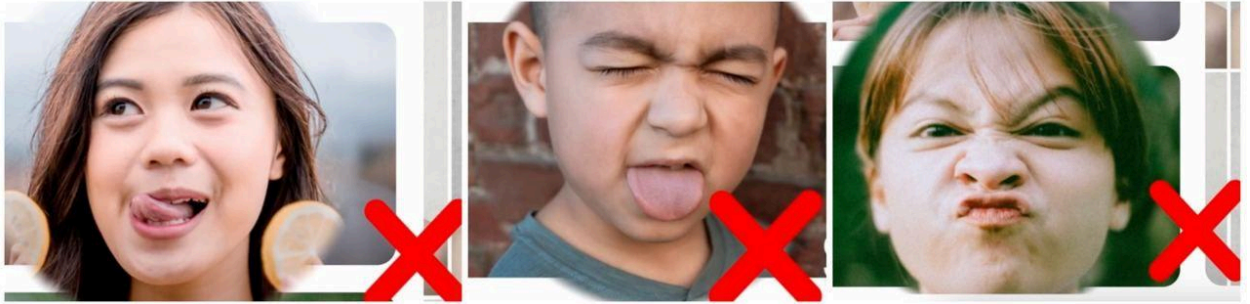

- **Looking at the Camera:** Maintain direct eye contact with the camera and avoid turning away or rolling your eyes - your eyes will be used for avatar creation as well, and their quality will have an impact on the result.
- **Cropping of Body Parts:** Avoid cropping hands or other body parts on the sides.

## Speech & Facial Expressions

- **Narration:**  
Slow, clear and expressive pronunciation - your avatar will have the same emotions and talking style as in the video. Try to open your mouth wide enough to capture teeth and your articulation. Follow the recommended expressiveness levels.  
**Avoid yawning, touching your face, or bursts of laughter.**
- **Pronunciation:** Loud, clear, and distinct. Enrich lip movements during recording, speak clearly, precisely, and loudly. **Avoid puffing, compressing lips, or sticking out the tongue.**

- Pauses: 2-3 seconds between sentences, up to 4-5 pauses per speech, naturally and with mouth closed.

## Submit Your Material

1. Save the file with high recording quality.
2. Use cloud storage such as Google Drive:
  - Create an "Avatar name" folder.
  - Upload the file to the folder.
  - Copy the public link.
3. Send the link by email to [avatars@elai.io](mailto:avatars@elai.io).

Turn your vision into reality with your custom avatar!
